700 Catalyzing Change in School Mathematics: Creating the Opportunities Our Students Deserve

This article gives an overview of key recommendations that can serve as catalysts for achieving an equitable mathematics education for each and every student.

DeAnn Hunkler, Sarah B. Bush, and Karen J. Graham

757 Fostering Parent–Child Math Talk with the 4Cs

Teachers can help parents by sharing this simple mnemonic that guides and reminds them of the best ways to support the development of their children's early mathematics foundation.

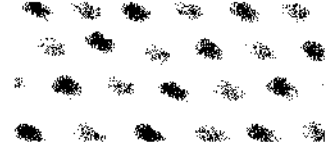

Anastasia L. Betts and Ji-Won Son

800 Learning to Collaborate While Learning Mathematics

The authors offer a task structure that both engages students in grade-level appropriate mathematics and allows the teacher to intentionally build a collaborative classroom culture.

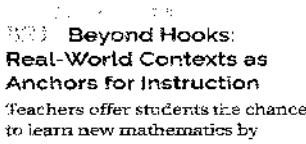

Frances K. Harper and Sandra Crespo

844 Developing Structural Reasoning with Diagrams

Advance students' strategies by highlighting properties, diverting attention away from procedures and algebraic skills to see the structures in expressions.

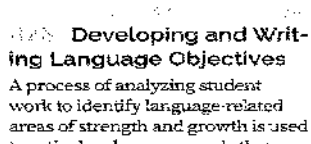

Hyung Sook Lee, Jaehoon Yim, and Jacqueline Coomes

893 Beyond Hooks: Real-World Contexts as Anchors for Instruction

Teachers offer students the chance to learn new mathematics by solving contextual problems that ground reasoning and support transitioning to abstract thinking.

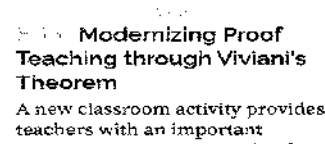

Mitchelle L. Stephan, Luke P. Reinke, and Julie K. Clive

925 Developing and Writing Language Objectives

A process of analyzing student work to identify language-related areas of strength and growth is used to articulate language goals that complement content goals.

Megan Staples, Mary E. Truxaw, and Vanessa Cruz

954 Modernizing Proof Teaching through Viviani's Theorem

A new classroom activity provides teachers with an important piece in the complex puzzle of introducing students to all aspects of mathematical proof.

Addie Armstrong and Dan McQuillan

647 Developing Norms with Silent Discussions

The insights gained through Chalk Talk, a nonverbal, interactive procedure that can be used to develop cocreated norms, shaped the support provided by both the teacher and students throughout the year.

Cory A. Bennett and Mick J. Morgan

648 #WODB: The Power of Dynamic Representations

Dynamic representations situated within a "Which One Doesn't Belong?" routine can extend students' exploration of functions and can enable a focus on the variant and invariant characteristics of mathematical objects.

Nina G. Bailey, Samuel D. Reed, Kristen Eye, Allison W. McCulloch, and Jennifer N. Lovett

657 Why Multiply? Area Measurement and Multiplicative Reasoning

Faced with the Growing Rectangle problem, middle school students grapple with how length and area change together.

Brandon K. Singleton and Amy B. Ellis

648 Revising Tasks to Be Culturally Relevant

Mathematics teachers must learn about and develop strategies to effectively teach students who have cultural backgrounds and experiences different from their own.

Heather R. Gallivan

651 The Status Quo Is Unacceptable

When so many students fail higher education mathematics courses every year and many more pass courses that do not prepare them for the future, we need innovative approaches to fixing this significant dilemma.
