- 21 **What is a metallic bond?** *Frederic F. Lang*
- 24 **Investigating friction and checking the understanding of variables using toys that both engage interest and promote understanding** *Catherine Dawn*
- 27 **Theme editorial: The role and relevance of science in addressing global concerns**  
*Berry Billingsley*
- 29 **Science at school: a sliding doors moment in the story of school education**  
*Berry Billingsley, Nicola Robinson, Robert Campbell and Stephen Thompson*  
Scientific enquiry and laboratory work are likely to be particularly challenging this year. Is it worth finding ways to do practical work and if so why? What are the benefits?
- 35 **The Open Science movement**  
*John Wood*  
The Open Science ecosystem has been developing across the world in the recent past and is now seen as a major movement for tackling global challenges by sharing information across cultures and disciplines
- 38 **Reframing science education in light of the COVID-19 pandemic**  
*Sibel Erduran*  
This discussion of media reporting of science during the pandemic gives some practical ideas about how teachers can unpack information about science presented in the media
- 44 **A relationship with nature – through the lens of a science teacher during lockdown**  
*Mauraiah Smith*  
A biology teacher made use of 'lockdown' time to take photographs of nature in a local park
- 46 **Professor Sir Colin Humphreys: a report on the diverse work of a leading scientist, crossing boundaries into engineering and theology**  
*Stephen Thompson*  
A brief biography showing how one established, career scientist has progressed his enthusiasm for enquiry into very different fields
- 48 **Should we teach about the genetics of intelligence?**  
*Michael J. Feiss*  
Teaching about the genetics of intelligence is risky – but might have benefits for students
- 54 **Epistemic insight: promoting collaborative teaching between RE and science teachers**  
*Berry Billingsley, Robert Campbell and Matthew Deane*  
A workshop where teachers work collaboratively to teach topics that occur in more than one subject, from their different viewpoints, teachers can highlight how science can inform, but not wholly answer, big questions
- 59 **Inspiring Minds: how big questions can build students' epistemic insight and improve attitudes towards STEM**  
*Finley Lawson, Megan Hunt, Danae Goodwin and Stefan Colley*  
How an 'epistemically insightful' approach to informal science learning (ISL) has impacted students' attitudes, aspirations and perceptions of STEM
- 65 **Student perceptions of the knowledge generated in some scientific fields**  
*Keith S. Taber, Berry Billingsley and Fran Figa*  
Students recognise science as a quest for understanding, as well as the technological value of scientific findings, but show some alternative conceptions of the nature of scientific knowledge

- 72 **Science teachers' lack of understanding of the nature of science: does it matter? Part 2**  
*Stuart Farmer*  
Teaching strategies and resources to address the issues around teaching the nature of science
- 78 **Inviting narrative back into the science classroom: telling the stories of the elements with graphic novels**  
*Eric Fishman*  
Creating graphic novels to tell the 'stories' of the elements in the human body helps students trace the complex histories of atoms
- 83 **A collaborative, user-based approach to developing science-communication resources using *Minecraft***  
*Laura Hobbs, Sam Holyman, M. Payne, Yvonne Ricketts and Carly Stevens*  
Science Hunters, an outreach project at Lancaster University that uses *Minecraft* to engage children with science, worked with schools to develop their new topic on bioluminescence

## Health & Safety

For all practical procedures described in SSR, we have attempted to ensure that:

- all recognized hazards have been identified;
- appropriate precautions are suggested;
- where possible procedures are in accordance with commonly adopted model risk assessments;
- if a special risk assessment is likely to be necessary this is highlighted.

However errors and omissions can be made, and employers may have adopted different standards. Therefore, before any practical activity, teachers should always check their employer's assessment. Any local rules issued by their employer must be obeyed, whatever is recommended in SSR.

Unless the context dictates otherwise it is assumed that:

- practical work is conducted in a properly equipped laboratory;
- any mains-operated and other equipment is properly maintained;
- any fume cupboard operates at least to the standard of CLEAPSS Guide G9;
- care is taken with normal laboratory operations such as heating substances or handling heavy objects;
- good laboratory practice is observed when chemicals or living organisms are handled;
- eye protection is worn whenever there is any recognised risk to the eyes;
- fieldwork takes account of any guidelines issued by the employer;
- pupils are taught safe techniques for such activities as heating chemicals or smelling them, and for handling microorganisms.

Readers requiring further guidance are referred to:
